

Documentation for the SDG and Source Code

Project Title: Salone Kiosk Ledger System (CSV Edition)

1. Introduction

The Salone Kiosk Ledger System is a Python-based desktop application developed using Tkinter. It helps kiosk owners record sales and expenses, maintain transaction records, and generate financial reports.

2. Sustainable Development Goals (SDGs)

SDG 8: Decent Work and Economic Growth – supports entrepreneurship and business growth.

SDG 9: Industry, Innovation and Infrastructure – promotes digital record keeping and innovation.

3. System Overview

The system records transactions, stores data, generates reports, calculates profit and tax, and evaluates business performance.

4. Objectives

Develop a computerized kiosk ledger system for managing business transactions and generating financial reports.

5. Description of the Source Code

The program uses Python, Tkinter GUI components, data validation functions, CSV storage, report generation, and business health evaluation.

6. Functional Requirements

Accept transaction details, validate input, save records, display records, generate reports, and calculate profit.

7. Non-Functional Requirements

Usability, reliability, performance, maintainability, and portability.

8. System Workflow

User Input → Validation → Save Transaction → Database → View Records → Generate Report → Financial Analysis

9. Benefits of the System

Reduces manual bookkeeping, improves accuracy, supports decision-making, and promotes digital literacy.

10. Conclusion

The project supports SDG 8 and SDG 9 while providing a practical financial management solution for small businesses.
